

succession ecology

Succession Ecology provides a broad range of environmental services: consulting, research, restoration, and the supply of native seed. The diverse nature of our business enables the development of well-rounded, pragmatic outcomes, tailored to your requirements. We are experts in large-scale restoration of arid and semi-arid ecosystems.

We serve clients in development, renewable energy, mining, infrastructure, agriculture and carbon farming, as well as Government, Council, and not-for-profits.

We apply ecological processes to achieve innovative and effective outcomes for your projects. Succession Ecology provides personalised attention for each project and produces high-quality outputs.

Our team of highly skilled and experienced ecologists, practitioners, project managers, and scientists can address all your environmental challenges.

Ecological Consulting

- Compliance with State and Federal legislation
- Vegetation clearance applications
- EPBC self-assessments and referrals
- Expertise in threatened communities, flora, and fauna
- Environmental management plans
- Significant and Regulated trees
- Community engagement and stakeholder workshops
- Five consultants accredited by the Native Vegetation Council

Research and Development

- Options analyses
- Experimental designs
- Data collection and analyses
- Reviews, data analyses, memos and public reports
- Monitoring for compliance requirements
- Design, establishment and management of seed orchards
- Developing best practice on-site environmental management
- Conference papers, presentations and workshops

Restoration and Revegetation

- Generation and implementation of management plans
- Application of "ground-up" approach to build functional ecosystems
- Arid and semi-arid habitat restoration
- Dust management and site stabilisation
- Direct seeding and tubestock planting
- Post-restoration management: weed control, watering, in-fill planting

Native Seed Sales

- Broad range of native species
- Capacity for bulk supply
- Seed cleaned to 'nursery' or 'revegetation' grade
- Seed viability testing
- Experts in arid and semi-arid regions
- Specialists in grass and chenopod species
